

International journal of therapeutic innovation (IJTI) is a bi-monthly publication that serves as a platform for the dissemination of original research articles, comprehensive review articles, insightful case reports, and concise short communications. With a focus on rapid publication, IJTI offers the convenience of online research article downloads and email notifications. Manuscripts are accepted for consideration only if they have not been published elsewhere and are not under review elsewhere. All authors and affiliated institutions involved in the research must approve the submission for publication.

The journal encompasses various types of manuscripts, including:

Original Research Articles: These are substantive research papers presenting novel findings, innovative methodologies, and significant contributions to the scientific community. They typically consist of distinct sections like an abstract, introduction, methods, results, and conclusions. Figures and tables must have appropriate legends and should be easily interpretable by readers, reviewers, and editors.

Review Articles: Review articles provide comprehensive analyses of existing literature, emphasizing recent advancements in a specific research area. These articles synthesize and critically evaluate current topics, offering a broader perspective. Review articles should follow a structured abstract format, with clear headings in the main text.

Short Communications: Short communications contain succinct but noteworthy information that contributes to scientific knowledge. These articles have a limited length and should focus on providing valuable insights, often accompanied by concise methods and results sections.

Case Studies: Case reports describe specific instances or observations of medical or technical interest. They may offer unique insights, diagnostic challenges, or therapeutic interventions.

Clinical Images: Clinical images showcase visual representations that aid in the understanding of medical conditions, procedures, or interventions.

The submission process requires authors to ensure that their work has not been previously published or submitted elsewhere, except as brief abstracts at scientific meetings. Authors must provide a comprehensive manuscript, including text, figures, and tables, in a single Microsoft Word file. Co-authors' details, affiliations, and contact information are required during submission.

The aim and scope of IJTI encompass a wide range of experimental research areas. The journal prioritizes high-quality review articles, original research, case studies, technical notes, and short communications.

To support authors in manuscript preparation, IJTI offers services such as

- | **English language editing**
- | **Manuscript formatting**
- | **Figure illustration**
- | **Graphical abstract design.**

These services aim to enhance the visual and illustrative aspects of the manuscript, including graphs, images, and flowcharts.

Manuscript formatting is crucial for submission. The text should be in **Times New Roman, 12-point font, with 1.5-line spacing**. **Tables, figures, and graphs must be properly integrated into the document and presented in portrait orientation**. The manuscript should adhere to a

structured format, including sections like **Introduction, Materials and Methods, Results and Discussion, Conclusion, Acknowledgments, Conflicts of Interest, and References**. References should be cited numerically and listed at the end of the manuscript. Proper chemical, biological, and enzyme nomenclature should be followed, and **abbreviations must be clearly defined** upon first use. The formatting of references, including journal articles, books, patents, and organizational sources, should be consistent and accurate.

Authors are encouraged to adhere to ethical guidelines, including obtaining appropriate ethical approvals for experiments involving animals and human subjects. The manuscript submission implies that authors have obtained necessary approvals, have no competing interests, and agree to the journal's terms.

Upon acceptance, authors will be required to pay an Article Publication Fee, covering publication costs. The journal does not charge any submission fees.

IJTI offers a platform for researchers to share their original work, critical reviews, case reports, and concise findings in various scientific domains. The journal's guidelines ensure proper manuscript presentation, adherence to ethical standards, and the provision of essential information for readers, reviewers, and editors alike.
